Annotation updates: updated gene identifications and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /producE="putative transport protein"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (20-JUN-1995) Guy P. Plunkett, University of Wisconsin, Laboratory of Genetics, 445 Henry Mall, Madison, WI 53706, USA This sequence was determined as part of the E. coli Genome Project (Frederick R. Blattner, director) at the University of Wisconsin-Madison. Supported by award HG00301 from the NIH Human Genome Project. The entire sequence was independently determined from E. coli MG1655; overlaps with other sequence determinations are annotated. This entry should be considered somewhat provisional; it will be updated and merged with others at a later

No.:
                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of the coding region of the BASB110 CC gene of Moraxella catarrhalis Mc2331 (ATCC 43617), a causative agent of oticis media in children and pneumonia in adults. The CC agent of oticis media in children and process (see AB20106). It differs from a BASB110 DNA PCR amplification product (see AB20106). It Dy having A at position 310 rather than G. This would cause an anion acid change from Ser-104 to Gly in the translated sequence. The invention provides BASB110 polypeptides, and polynucleotides encoding them, as well as expression vectors, host cells and methods for producing BASB110 polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASB110 polypeptide, or a polypeptide, an immunogenic fragment of a BASB110 polypeptide, or a polypeptide having at least 8% amino acid sequence identity to BASB110, or comprising a polynucleotide encoding such a polypeptide. A claimed having at least 18% amino acid sequence identity to BASB110, or a basB110 polypeptide and method of diagnosing a Moraxella infection involves identifying a BASB110 polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection comprises polynucleotides also have utility in diagnosis of the stage and type of infection, and also for therapeutic or prophylactic purposes, in particular genetic immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 969 BP; 265 A; 214 C; 242 G; 248 T; 0 other;
